

Connect.

Spend more time having fun with family and friends. Simply install ShoreMaster's strong and stable Poly Dock once and forget it.

PolyDock with ShorePort

It's so easy! ShoreMaster's floating modular Poly Dock is perfect for fluctuating water conditions. The durable, non-slip surface is strong, stable and safe. Use the modular pieces for unlimited configurations. The dock can easily be expanded or reshaped. Add the ShorePort for the easiest way to dock your personal watercraft. Just drive on to load, and roll off to launch. The cupped front and rollers conform to any hull design.

Features:

Each 4' x 10' or 6' x 8' section is rotation molded from rugged, durable polyethylene for years of convenient, dependable use.

The special Poly Dock connector easily joins sections to each other anywhere along the perimeter.

Polyethylene pipe brackets keep your dock in place in changing water levels. The most stable floating dock configurations have a "T" or "L" layout or have fingers jutting from the sides.

We Cover The Waterfront.
